Expression vectors, cultured cells and a method of producing zsig39 polypeptide are claimed, as well as zsig39 polypeptides having N- or C-terminal affinity tags, toxins, radionucleotides, enzymes or fluorophores, fusion proteins including zsig39 polypeptides, an antibody that specifically binds to an epitope of zsig39, and a method for modulating free fatty acid metabolism by administering a zsig39 polypeptide. The zsig39 polypeptide may also be used in organ preservation, for cryopreservation, for surgical pretreatment to prevent injury due to ischaemia and/or inflammation, and as an antimicrobial agent, promoting lysis or phagocytosis of infectious agents.

```
The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel disease, justen-sensitive enteropathy and Whipple's disease, autoimmune or immune-mediated skin diseases, allergic diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-MAR-1999;
                                                                                                                                                                         Sixty four PRO polypeptides, useful in the diagnosis and treatment immune related disorders, e.g. systemic lupus erythematosis, rheuma arthritis, osteoarthritis, thyroiditis and diabetes mellitus -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-SEP-1999

immunological diseases of the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease. AAC58397 to AAC58578 represent PCR primers and hybridisation probes in the isolation of human PRO sequences. AAC58579 to AAC58642 and AAB33414 to AAB33477 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.

It is isolated from human foetal lung tissue, cDNA library, identified using probes based on a consensus sequence DNA34398, derived from secreted protein extracellular domain (ECD) expressed sequence tag (EST). This clone is assigned ATCC deposit No: 209492. PRO344 functions as a neoplastic cell growth inhibitor and is used for treating tumours, using an effective amount of PRO655, PRO364 and PRO344. This composition is especially useful for treatment of human cancers such as breast, prostate, colon, lung, renal, ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO1265, PRO344, PRO343, PRO347, PRO357, PRO715, PRO117, PRO509, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB01318 standard;
                                                                  New human nucleic acids encoding secreted and transmembrane polypeptides which are designated as PRO polypeptides are described polypeptides are described from membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources.
                                                                                                                                                                                                                                                                                                                                                                                                 01-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrovytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or of T-lymphocytes, the release of a cytokine from peripheral blood monocytes (PBMCS), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gerritsen Smith V,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO phlypeptides, and detect the presence of mammalian tumours e.g. lung, breast, prostate, cervical -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PRO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences human and murine secreted or transmembrane proteins TANGO 253, 7 TANGO 281 and INTERCEPT 258. These are useful in the treatment coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acids for treating diseases and disorders, e.g atherosclerosis, infection, autoimmune diseases, obesity, disorders, brain disorders, tumors, diabetes, arthritis, sclerosis and asthma -

ZACRP5 has a carboxyl-terminal C1q domain. The zacrp5 gene located on human chromosome 16. zacrp5 gene and protein are useful for diagnosing and treating inflammations, for determining arterial remodelling, for modulating calcium ion concentration, hormone secretion, DNA synthesis or cell growth, inositol phosphate turnover, arachidness to release the concentration of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        adipocyte complement related protein homology inflammation; hormone secretion; inclot phosphate; arachidonate; phospholipase C activation; gastric emptying; neutrophil activation; superoxide anion production; antimicrobial; acute vascular injury;

                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                    protein homolog, ZACRP6 protein and coding sequence (see AAB49596 and AAC9051). ZACRP6 has a carboxyl-terminal Clq domain. The zacrp6 gene is located on human chromosome 21q. zacrp6 gene and protein are useful for diagnosing and treating inflammations, for determining arterial remodelling, for modulating calcium ion concentration, hormone secretion, DNA synthesis or cell growth, inositol phosphate turnover, arachidonate release, phospholipase C activation, gastric emptying, human neutrophil activation or ADCC capability and superoxide anion production. zacrp6 gene and protein are also useful as antimicrobial applications, preferably against bacteria and virus, for complement inhibition, for treating acute vascular injury, disseminated intravascular coagulation, arteriosclerosis and for wound healing. The present sequence is human adipocyte complement related protein homolog zsig39. This protein was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel adipocyte complement related protein homolog, ZACRP6, useful as modulators of neurotransmission and for treating disseminated intravascular coagulation, arteriosclerosis and acute vascular injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Piddington

                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of the human and murine secreted or transmembrane proteins TANGO 253, TANGO 27 TANGO 281 and INTERCEPT 258. These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.

CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags are to restore normal activity of (II) is useful in gene therapy techniques (II). (II) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (II) and its binding partners are useful in medical independent. (II) and its binding partners are useful for treating consisting of sites expressing (II). (I) and (II) are useful for treating consistency of the polypeptide and polynucleotide sequences have applications in the product of the polypeptide and polynucleotide sequences have applications in the produce other types of data and products dependent on DNA and CC diagnostics, forensics, gene mapping, identification of mutations consistency of the relations of the products of the polynucleotide sequences of the polynucleotide sequences of the polynucleotide sequences of data and products dependent on DNA and consistency of the polynucleotide sequences of data and products dependent on DNA and consistency of the polynucleotide sequences of the invention.

CC diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (TI) sequences. (PCR) primers, oligomers, and for chrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polymerase chain reaction (PCR) primers, oligomers, and for cooling the polymerase chain reaction of (II). The and gene mapping, and in recombinant production of (II). The

                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of the human and murine secreted or transmembrane proteins TANGO 253, TANGO 21 TANGO 281 and INTERCEPT 258. These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.
